

Wisconsin Department of Natural Resources SWIMS Project Summary

General Project Information

Project ID: LPL-041 (2008-1)
Name: PARK LANE MANAGEMENT DISTRICT: Park Lane Watershed and Water Quality Assessment Study
Type: Lakes Grant
Subtype: Large Scale Lake Planning
Status: COMPLETE
Start Date: 04/01/1991
End Date: 12/31/1995
Purpose: Hydrologic budget will be evaluated on watershed delineation on a topographic map; collection of evaporation and precipitation data; computation of lake stage and storage through use of recording gauge and bathymetric map. Phosphorus budget will be developed by: collection of approximately 60 samples from Fox River inflow to be analyzed for phosphorus concentration; monitoring of in-lake water-column phosphorus at two sites as described in part II, #2 of project proposal in application; estimation of internal phosphorus loading from bottom sediments; monthly sampling of phosphorus concentration in lake outflow. Quantification of lake water chemistry by periodic sample collection and depth profiles; data collected will be reported to DNR and published in USGS annual report. Information will be disseminated to the public through public meetings, newsletter mailings and local media. Project results will be repositated at:

Title	Description	Author	Published	Comments
Hydrology and Water Quality of Park Lake, South-Central Wisconsin	Fact sheet describing the lake and its watershed; data collection and analysis; hydrology; phosphorus loading and lake water quality. Park Lake is a eutrophic lake with perceived water-quality problems that are due primarily to large inputs of phosphorus from its watershed. The major source of phosphorus in the lake is the Fox	USGS	12/31/1995

	River. Large quantities of phosphorus are delivered to and pass through the lake during relatively short periods of overland runoff, but phosphorus loads delivered during periods of low flow are sufficient to cause eutrophic conditions and poor water quality as measured by trophic state index and Lillie and Mason's water quality index.
