

## Wisconsin Department of Natural Resources SWIMS Project Summary

**General Project Information**

**Project ID:** CBSM-10039565  
**Name:** Scuppernong Creek at Parry Rd and Hunters Lake  
**Type:** Citizen Based Stream Monitoring  
**Subtype:** Volunteer Monitoring  
**Status:** ACTIVE  
**Start Date:** 12/16/2014  
**End Date:** 12/31/2099  
**Purpose:** The Water Action Volunteers Program (WAV) involves citizen monitors in the collection of stream water quality data that may be used by the Wisconsin Department of Natural Resources (DNR) and their partner organizations. Program goals include building relationships between DNR staff and citizen monitors while assessing streams in need of additional monitoring, restoration, and/or protection. Ultimately, volunteer participation increases capabilities of the DNR and communities to monitor streams, providing water quality information that may be used to make decisions that affect the management of streams throughout Wisconsin.  
**Objective:** The main goal of the WAV program is to preserve and protect Wisconsin's streams and the lakes to which they are connected. Objectives of the program are to educate and empower citizens to share their data, to obtain high quality data useful for DNR decision-making, and to encourage data and knowledge sharing. The process of data collection by Wisconsin residents enhances their understanding of water quality parameters, and in many cases, interests them in assisting with more sophisticated projects, including the collection of additional biological, chemical, and physical site data. Ultimately, a goal is that DNR staff trust volunteer data results, and therefore utilize WAV data to assist in making management decisions.  
**Comments:**  
**Outcome:**  
**Study Design:** Volunteer stream monitors assess water quality parameters identified in the DNR's Water Resources Monitoring Strategy for Wisconsin. Volunteers may identify their own sampling locations. In some instances, WAV Coordinators, DNR, or county staff may recommend sites based on the need to acquire status or trends information, or other types of monitoring that are priorities. In general, volunteers are asked to monitor from May through October. Advanced volunteers choose primary (P) and secondary (S) sampling dates in advance and note on their data sheets which of those dates they monitored. Volunteers are asked to sample on the primary date unless there are safety concerns about being at the stream site (e.g., tornado, lightning, dangerously high flows) or a personal or family emergency. The goal is to monitor at the same time each month, about 30 days after the last monitoring visit. Volunteers are instructed to enter data into the Surface Water Integrated Monitoring System (SWIMS) database by the end of each month and to immediately report extreme conditions that may be hazardous to aquatic life to their local DNR or County biologist. Parameters measured monthly include: dissolved oxygen (concentration), dissolved oxygen (saturation), streamflow, transparency, temperature (instantaneous and/or continuous measurements), and sometimes pH. In addition, macroinvertebrates (Biotic Index) are assessed twice per year and habitat conditions are assessed once per year. Some volunteers monitor specific conductance, chloride, total phosphorus, E. coli, or other parameters.  
**QA Measures:** For advanced volunteers, a WAV staff person, local coordinator or authorized representative visits with 10% of volunteers annually to conduct side-by-side monitoring. The goal of field QA checks is to check that volunteers are properly calibrating their meters (if used) and following the sampling methods correctly. Staff members conducting QA checks also ensure that equipment is functioning properly and answer any volunteer questions or concerns. A Data Manager runs regular (monthly whenever possible) database queries throughout the field season to evaluate the quality of data entered into the database and follow-up with volunteers to address anomalies that are identified.

## Wisconsin Department of Natural Resources SWIMS Project Summary

Action	Detailed Description	Start	End Date	Status
Citizen-Based Stream Monitoring	Collect chemical, physical, and/or biological water quality data to assess the current overall stream health. The data can inform management decisions and may be used to identify impaired waters for biennial lists.	12/16/2014	12/31/2099	IN_PROGRESS

## Wisconsin Department of Natural Resources SWIMS Project Summary

Title	Description	Author	Published	Comments
10.28.17 Scuppernong	Culverts show highest flood level; left side completely blocked by roots and plant matter deposited during highest flood levels.	Karen Schoenike	10/29/2017	
10.28.17 Scuppernong	Concrete blocks & stream bottom now clearly visible; water returned to pre-flood levels of April and May 2017.	Karen Schoenike	10/29/2017	
10.28.17 Scuppernong fish	Very small fish visible at tip of white plastic spoon.	Karen Schoenike	10/29/2017	
4.3.17 Scuppernong 1	Bend in the river looking downstream	Karen Schoenike	10/29/2017	
4.3.17 Scuppernong 2	Culvert water levels	Karen Schoenike	10/29/2017	
4.3.17 Scuppernong test site	As you approach stream side where testing is done from. Gauge water levels by area of concrete blocks visible.	Karen Schoenike	10/29/2017	
6.25.17 Scuppernong	Stream site where testing is done; flooding level covers concrete blocks	Karen Schoenike	10/29/2017	
8.27.17 Scuppernong	Stream side where testing is done, concrete blocks submerged, water level climbing to road	Karen Schoenike	10/29/2017	
8.27.17 Scuppernong 1	Culverts half full and flowing fast	Karen Schoenike	10/29/2017	
9.24.17 Scuppernong	Water levels lowered enough to reveal concrete blocks at stream side where testing is done.	Karen Schoenike	10/29/2017	
9.24.17 Scuppernong 1	Culverts show previous high water flood levels and reveal displaced stones	Karen Schoenike	10/29/2017
