

Wisconsin Department of Natural Resources SWIMS Project Summary

General Project Information

Project ID: NKE47
Name: East River PWS Plan - Nine Key Element Plan
Type: Watershed Planning
Subtype: Priority Watershed Plan
Status: COMPLETE
Start Date: 03/01/1993
End Date: 12/31/2012
Purpose: The East River Priority Watershed Project plan assesses the rural and urban nonpoint sources of pollution in the East River Watershed Project area and guides the implementation of nonpoint source control measures. These control measures are needed to meet specific water resource objectives for the East River and its tributaries and for lower Green Bay.
Objective: The primary objective of the project is to reduce nonpoint source pollution to the surface water and groundwater, and to enhance and protect the water quality of streams in the East River Watershed Project area.
Comments:
Outcome: For the communities of Green Bay, De Pere, Allouez, Ashwaubenon, Bellevue, (as a group) the urban nonpoint source control targets are: 50% reduction of the 1986 sediment load from the incorporated area and 40-60% reduction of the 1986 heavy metal load (as measured in zinc or copper) to reduce the potential of violating the state water quality standards of stormwater.
